

52 PICKUP

FLOWABLE CHARCOAL / DEACTIVATOR

52 Pickup is a Flowable Suspension of activated carbon manufactured specifically for agricultural applications. It is widely used in agriculture as a soil amendment to protect and enhance plant and turfgrass growth and vigor. 52 Pickup effectively ties up organic toxins such as herbicides from soils to provide a safe environment for new or existing root systems.

52 Pickup is especially effective in protecting areas where herbicides have been spilled or over applied. 52 Pickup's ability to decontaminate soil is also beneficial when replanting is desired in an area where pesticides or herbicides have been applied.

52 Pickup can be used on hydraulic fluids, some petroleum products, organic pesticides, herbicides and insecticides.

When overseeding or early germination of seed is required, 52 Pickup may be applied to turf areas treated by preemergent herbicides to ensure better and more even seed germination. Prepare the seed bed as usual, then apply 52 Pickup at the rate of 32 to 64 fluid ounces per 1000 square feet to the soil; then proceed with the seeding operation.

DIRECTIONS

For Spills: Apply 32 to 64 oz per 1000 sq.ft. of contaminated area. If spill is severe, apply full strength and wash into soil and root zone at a 4-6 inches depth.

For Deactivating Turf Herbicides: Apply 32 to 64 ounces of 52 Pickup in sufficient water for good distribution per 1000 sq.ft. of turf area. Grass areas should be washed free of heavy charcoal deposits. Areas where herbicidal effect has been terminated may be seeded within 24 hours of applications.

☼ 52 Pickup will disperse well in a spray tank, so do not use any wetting agents with 52 Pickup as they will tend to be adsorbed by the carbon using up precious surface area.

☼ 52 Pickup may be used as an aid to transplanting by preparing a root dip, or by adding a small amount in with the transplant water.

52 Pickup may be used to de-contaminate spray tanks, reducing soil contamination from oil spills, deactivating turf herbicides, protecting seeds, and enhancing seed germination.
