Aquifer

Liquid Granular Pellet
Soil Surfactant

AQUIFER, a new choice in soil surfactants, produces and maintains an omni directional flow of applied irrigation and/or natural rain water. Aquifer's unique characteristic of producing downward and lateral movement of water (omni directional) provides a uniform moisture profile throughout the soil structure for up to 45 days. This allows not only water but also chemicals and nutrients to be distributed evenly throughout the root zone. The end result is less summer stress, reduced wilt, less localized dry spots and improved re-wetting capability.
