

Aqua-Root

Wetting Agent/ Humate

AQUA-ROOT

- Increases the cation exchange capacity in the growing media
- Increases nutrient uptake
- Decreases leaching of nutrients
- Provides a uniform soil moisture profile
- Increases plant vigor and survivability
- Encourages deeper root growth
- Promotes faster and more complete root development
- Helps leach harmful salts
- Increases stress tolerance

AQUA-ROOT Liquid, Soil Penetrating Plant Stimulant, is available in 55, 15, 5, and 2.5 gallon recyclable containers. AQUA-ROOT Granular (Granular Humate impregnated with AQUA-AID Liquid) is available in 50 pound bags, 40 per pallet. AQUA-ROOT Pellets are six ounces in weight and individually packaged in boxes of 24 or cases of 144.

CARBO-AID is a complex carbohydrate base microbial food supplement comprised of complex natural sugars and proteins, leather tankage, kelp, humic and fulvic acids.

Carbo-Aid

- Reduced accumulation of thatch by increasing microbial activity
- Less leaching of nutrients and fluctuation in growth from fertilizer application. Soil microbes provided with a usable carbon source and balanced nutrition will quickly absorb any excess nutrients. These nutrients will then be slowly released through the natural mineral cycling in the soil.
- Greater resistance to disease and stress by promoting a balanced soil ecology. CARBO-AID will encourage the growth of beneficial microbes.
- Increased root growth and plant vigor by providing small quantities of simple sugars which can be absorbed by the plant. CARBO-AID supplies free photosynthates which the plant uses for root growth.

CARBO-AID Liquid is available in 2.5 gallon recyclable containers and 180 gallon pallets.
