

— AXIS

AXIS calcined diatomaceous earth soil amendment changes the physical structure and texture of soil like no other amendment does because of the combined effects of its low bulk density, unique internal continuous porosity, and durability. AXIS meets or exceeds all USGA Green Section recommendations for stability, infiltration, porosity, and particle size distribution.

- Resists compaction
- Balances O₂ and H₂O in soil
- Increases infiltration
- Buffers soil temperatures
- Increases soil permeability
- Increases plant available water
- Reduces soil bulk density
- Promotes deeper, denser rooting
- Better looking turf during stress

**Golf Courses * Landscapes * Sports Fields
Topdressing * New Construction & Renovation**

Axis can be incorporated into topdressing mixes, used as an amendment for drill and fill aeration material, sold alone in 50# bags, or custom mixed to accommodate for each individual's need.

Base Organics, Inc.

Third Base Natural and Organic Based Rootzone Amendment -

- an economical product for the professional looking to mineralize the entire rootzone profile and provide organic matter and carbon to help jump start microbial populations. The make-up and application rate of Third Base make it an excellent product that provides rock minerals, addresses pH, contains micronutrients and composted organic matter and will not significantly compromise pore space.

Second Base Natural and Organic Supplement

helps to correct low levels of phosphorus and potassium by providing slowly available high levels of phosphate rock and greensand. Through repeated use, Second Base also provides fish meal and sulfate of potash for more readily available sources of phosphorus and potassium, respectively which aids in increasing soil levels of phosphorus and potassium. Added benefits include digestible protein, amino acids, humic acid, growth hormones and 10% calcium. Second Base helps to mineralize your soil, as well as provide food for the microorganisms that live there. Use at time of aeration.

First Base Root Zone Amendment

-- formulated to help get seedlings and sod off to a rapid and healthy start by providing both the plant and construction mix with amino acids, growth hormones, carbohydrates, protein, vitamins, organic matter, rock minerals, humic acid and 10% calcium. Apply to the top 2-3 inches of construction mix to help assure the growth hormones and humic acid are placed where they will be of most benefit to the young seedlings. First Base is a safe and valuable product to use in the construction of greens, tees and athletic fields.
