- Humate
- Axis
- Profile
- Aqua-Aid Surfactants and Stimulants
- Sterilized Topsoil
- Additional Lime
- Calcium Sulfate
- 0-20-0

**On-Site Blending of Construction Mixes** using state of the art computerized equipment that can prepare over 200 tons per hour with continuous consistency maintained by on-site quality control testing. Adding of amendment and fertilizers, with pH adjustment, is done at time of blending. **E & S** uses three component blenders plus additive hoppers, which permits a broader range of mix capabilities, when a three component mix is required, such as sand, peat, and topsoil or two sands and peat. All blended products pass thru a mixing and sizing process to produce uniform distribution of the organic component and reduce separation.

- ★ Completely homogenous. Will not separate.
- ★ Improves infiltration and reduces compaction! Flows freely and will spread evenly from any spreader!
- ★ Mats into the greens easier and hides better than any other product used.
- ★ Absolutely no waste! Does not contain any unusable particles that must be removed.
- ★ The perfect top dressing for light, frequent applications!

*We custom blend to each specification at **no extra charge!***
